About me

Hey! My name is Zuleikha and I am a student of RS school. I am taking a front-end development course and plan to work in the field of web development. Now I don't have much programming experience, but I have a great desire to study and achieve my goal.

Skills

- HTML
- CSS
- JS basics
- Git, GitHub
- Adobe Photoshop, Figma
- VS Code

Code example

Codewars 7 kyu kata

Kata descriprion:

Oh no!

Some really funny web dev gave you a sequence of numbers from his API response as an sequence of strings!

You need to cast the whole array to the correct type.

Create the function that takes as a parameter a sequence of numbers represented as strings and outputs a sequence of numbers.

ie: ["1", "2", "3"] to [1, 2, 3]

Note that you can receive floats as well.

My solution:

```
function toNumberArray(stringarray) {  
  return stringarray.map(parseFloat);  
}
```

```
toNumberArray(["1", "2", "3"]);
```

Experience

I have no experience as a web developer as I am a beginner. But, recently I have been working on the layout of educational projects (you can see it in the [GitHub](#)).

Education

I graduated from the College of Foreign Languages with a degree in Pedagogy of Additional Education. I studied English and Japanese.

Languages

- Russian: native
- English: intermediate
- Japanese: elementary
